

Living interoperability: Siconia™ SMARTY IQ SMGW is integrated into the TREMONDi GWA software

Hamburg, 12th June 2019

THE SMART METER GATEWAY (SMGW) SICONIA™ SMARTY IQ FROM SAGEMCOM DR. NEUHAUS IS INTEROPERABLE WITH THE GATEWAY ADMINISTRATION SOFTWARE FROM TREMONDi, A JOINT VENTURE OF WILKEN AND IVU.

Another important step towards interoperability of smart metering systems (German: iMSys) was taken jointly by Sagemcom and TREMONDi. Along the technical guideline TR-03109 of the German Federal Office for Information Security, comprehensive test cases were tested with regard to the LMN, HAN and WAN interfaces, the communication links and protocols as well as the metering data processing of the Siconia™ SMARTY IQ in combination with the TREMONDi GWA software. All tariff application cases supported by the gateway (TAF 1, TAF 2, TAF 6, TAF 7), which have a high relevance for the balancing of power consumption, were successfully checked.

The two companies are working together to ensure that the seamless interaction between the GWA software and SMGW is promptly included in the revision of the type examination certificate of the Siconia™ SMARTY IQ. Through the comprehensive compatibility test, Sagemcom demonstrates that the smart meter gateway not only meets all security and data protection requirements, but also interacts with downstream smart metering system components in a highly standardized and future-proof manner. Sagemcom Dr. Neuhaus is promoting the smart meter rollout in Germany with its intensive interoperability efforts.

About Sagemcom

A French high-tech group of international dimensions, Sagemcom operates on the broadband (set-top boxes, multi-gigabit gateways), smart city and Internet of Things (founding member of LoRa Alliance) markets.

With a revenue of 2.05 billion euros, Sagemcom employs 4,000 people on five continents. Sagemcom aims to stay a world leader in communicating terminals with high added value.

About TREMONDi

TREMONDi is a joint venture of the Wilken Software Group, Ulm, and IVU GmbH, Norderstedt. It was established as an independent platform provider of solutions for smart meter gateway administration that supports the integration of SMGA processes with all established billing and industry systems for the utilities industry. The platform is operated in two geo-redundant data centers in Ulm and Norderstedt, which meet all requirements of the technical guideline TR- 3109-6 and are certified according to ISO 27001. With its platform Tremondi supports both the basic responsible as well as the competitive measuring point operation (gMSB/wMSB).
