

## Benefits

- Great advantage for the operational process due to devices which are configured and immediately ready for operation
- Fast integration in existing networks
- Simplification of procedures in automation processes
- Reduction of operational costs
- Configuration matrix offers a transparent basis and guarantees a consistent configuration
- Reduction of possible configuration errors which may be caused by individual configuration
- Additional application check as a result of a device test after the configuration

## Key Features

- Order specific or device specific configuration is possible
- A model configuration matrix will be provided
- Support to set up the configuration matrix
- Each device can be configured according to customer requirements
- Configuration of various security features is possible, e.g. determination of individual passwords
- Each device will be tested after configuration

### The Configuration Service is available for the following product families:

- **TAINY** Wireless modem and router for industrial networks
- **ZDUE** Remote meter modems
- **SyM<sup>2</sup>** SyM<sup>2</sup>-Modules for remote meter reading
- **SMARTY IQ** Intelligent metering system for Smart Metering
- **MUC** Controller for Smart Metering Applications
- **gMUC** Controller for Smart Metering Applications

Order number	Specification
622287	Creation of a customer specific model configuration matrix - incl. customer agreement, release and production introduction
622263	Production of the devices according to model configuration - one configuration for all devices
622270	Production of the devices according to model configuration - individual configuration for each device
